CBD M-1 CHAMBER BLOCKING DEVICE MODEL-1

A NEW DESIGN IN FIREARMS SAFETY AND READINESS.

The CBD M-1 (Chamber Blocking Device Model-1) blocks the chamber, yet permits fast removal for immediate loading and action.

The CBD M-1 design allows the rifle or carbine to be carried with a magazine inserted, chamber unloaded, and be visually identifiable as a firearm with an unloaded chamber.

The CBD M-1 can be employed in many types of semi and full auto rifles and carbines.

DIRECTIONS FOR USE

The CBD M-1 is designed for the M-16/M-4 type rifle and carbines. It can be used with other military type rifles and carbines such as the M-14 /M1A that have an extractor enclosed within the bolt.

- Some rifles/carbines have a sharp inner ejection port edge that can cut into the CBD M-1 if the operator allows the bolt to slam forward against the CBD M-1. Crushing or cutting of the CBD M-1 will result in a reduced service life or breakage of the CBD M-1.
- **DO NOT use the CBD M-1 with SHOTGUNS or other type of semi-auto firearms that have an extractor that extends forward of the bolt.**
- The action of pulling the CBD M-1 out of the shotgun could cause damage to the extractor and render the firearm inoperable.

Step 1 — Before first use, bend the long leg of the CBD M-1 into a curve to ease insertion into the chamber of the rifle. (See Figure 1).

(Figure 1)

When using the CBD M-1, practice proper safety precautions:

1. Treat every weapon as if it were loaded.
2. Never point a weapon at anything you do not intend to shoot.
3. Keep your finger off the trigger until you are ready to fire.
4. Keep the weapon on safe until you intend to fire.

Step 2 —

- Safety engaged.
- Muzzle pointed in a safe direction.
- Clear the rifle of all ammunition.

(Figure 2)

While holding or locking the bolt of the rifle to the rear, insert the long leg of the CBD M-1 through the ejection port and into the firing chamber. (See Figure 2).

WARNING, the CBD M-1 MUST be inserted into the firing chamber to block the chamber from being loaded and to ensure that a round of ammunition is not remaining in the chamber due to an extraction failure. If the CBD M-1's long leg does not go all the way into the chamber, it indicates that there is possibly a live round (or an empty case, or some other blockage) already in the chamber.

Step 3 — Gently release the bolt against the CBD M-1 so that it is held firmly in place. For field deployment, a loaded magazine can be inserted and locked into magazine well. (CBD M-1 does not prevent inserting or

removing a magazine while in place.) If the rifle is needed for firing use, grasp the CBD M-1 through the open ring with one or two fingers and pull firmly and quickly away from the rifle. (See Figure 3). The CBD M-1 can be immediately discarded. The user may then choose to load the rifle by pulling the bolt to the rear or carry the rifle with the chamber empty until deciding to load, or re-secure the rifle.

(Figure 3)

Step 4 — After removing the CBD M-1, if the operator has not chambered a round of ammunition and desires to re-secure with an empty chamber in the rifle; remove the magazine and follow **Steps 1-3** above.

Step 5 — If a round of ammunition has been chambered, and the operator chooses to unload and return to the original rifle readiness condition; using all safety precautions, follow steps 1-3. The operator may then reinsert the magazine or not, as conditions or policy dictates.

WARNING: DO NOT INSERT THE CBD M-1 INTO AN EXTREMELY HOT RIFLE CHAMBER AS IT MAY CAUSE DAMAGE TO THE DEVICE OR MELT INTO THE CHAMBER, THEREBY RENDERING THE RIFLE INOPERABLE.

Inspect CBD M-1 on a regular basis for signs of wear, cutting, or cracking, as extended or hard use may cause the CBD M-1 to become damaged which could render the rifle unavailable for use when desired or needed. The CBD M-1 should be discarded and replaced if signs of damage appear. Do not attempt to fire the rifle while any portion of the CBD M-1 remains in the firearm.

If you are not familiar with the operation of your rifle, do not use CBD M-1 until you have been trained and understand the operation and use of the rifle.
